

A PURE digital signal

The fruit of Italian research, LIMFA[®] Therapy is a medical device for non-invasive cellular stimulation, through ultra-weak, complex and patented magneto-electric fields which, by entering into bio-resonance with cellular ions, are able to accelerate self-repair cell with an average efficacy, scientifically proven, of 80%.

To get the most out of LIMFA[®] Therapy sequences, the signal must reach the cells without electromagnetic noise and that is why we have developed an electromedical computer capable of emitting digital signals free of 99% electromagnetic noise. This led the LIMFA[®] device to therapeutic efficacy never previously achieved in rehabilitation.

Tissue Repair

- Bones
- Muscles
- Tendons
- Cartilage
- Nerves
- OSTEOPOROSIS

Pain therapy

- Fibromyalgia
- Rheumatology
- Traumatology
- Osteoarticular pathologies
- Musculoskeletal pathologies
- Edema

CONTACTLESS
TECHNOLOGY
